

Scanning paper to SharePoint? Now it's child's play

This young man has no idea how lucky he is. Before young Archie was born scanning paper documents to Microsoft SharePoint specifying the correct Content Type and adding Site Column Values was complex, time consuming and prone to error. Today there are three Dark Blue Duck Scanning Enabler™ products that together make scanning and indexing paper documents so easy.

The main Dark Blue Duck Scanning Enabler product installs in less than 30 seconds. It integrates seamlessly into Microsoft® Windows SharePoint Services

Version 3 and Microsoft Office SharePoint Server 2007. It adds the administration and user facing web pages Archie needs to move documents from a nearby desktop scanner to a SharePoint Document Library Folder or List Item. It allows him to print barcode pages that automate the collection of metadata, no matter how he chooses to scan in his paper documents.

The Scanning Enabler Capture™ application is perfect for bulk scanning and indexing work. Archie can capture hundreds of paper documents in one go. He is able to specify the Content Type and

Site Column Values for multiple documents at the same time. Then he can publish to SharePoint just as he would from any Microsoft Office 2007 application.

The Scanning Enabler Routing Coversheet Service™ allows Archie to add paper documents to SharePoint without even touching his Dad's computer. He adds one or more barcode pages to the front of each paper document and presses a single button on his Multifunction Printer.

As we said child's play.

The main Dark Blue Duck Scanning Enabler™ product enhances Microsoft® Office SharePoint® Server 2007 (MOSS) and Windows® SharePoint® Services Version 3.0 (WSS) adding support for paper.

Legal professionals, health professionals, public servants and others are benefiting from the combination of Microsoft's SharePoint products and Dark Blue Duck's Scanning Enabler. Large organizations are using the Scanning Enabler with MOSS to extend their Enterprise Content Management and search capabilities. Small companies are using the Scanning Enabler to address challenges they face when swamped by incoming paperwork (especially when the business is geographically distributed).

Use our flagship product to scan documents and batches of documents to SharePoint directly from the SharePoint User Interface. Use your existing desktop scanners or a shared desktop scanner. The Dark Blue Duck Scanning Enabler™ is easy to understand, easy to install and easy to use.

- Seamlessly integrated with SharePoint User Interface
- Adds Scanning functionality to all new and existing document libraries and lists
- Use a Desktop Scanner or a shared Desktop Scanner
- Use Barcode pages to specify a SharePoint Content Type and one or more Site Column Values (metadata)
- Uses Microsoft Office Optical Character Recognition (OCR) to create searchable documents
- Creates searchable pdf, mdi and tif formatted documents

Tight integration with SharePoint Content Types and Site Columns eliminates complex setup and maintenance work.

The intuitive user interface reduces your training costs.

- Seamlessly integrated with SharePoint Content Types, Document Libraries and Site Columns
- Publish scanned documents to all new and existing document libraries
- Uses Microsoft Office Optical Character Recognition (OCR) to create searchable documents

Scanning Enabler 2007™ v2.x Capture

Desktop scanning application for SharePoint. Connects to SharePoint servers with Scanning Enabler 2007™ v2.x installed any edition. \$108.00
License for one client computer.

The Scanning Enabler 2007™ Routing Coversheet Service™ supports Multifunction Printers (MFPs) and Digital Senders. It makes use of Routing Coversheets, Content Type Sheets and Site Column Value Sheets. These are printed pages that are scanned by the MFP and used to let the Scanning Enabler know where the scanned document should be stored and what Site Column Values to set. Documents can be sent directly to Document Library folders or SharePoint List Items. The drop location can be configured as "write only" so security can be very tightly configured. Supports Windows File Shares and Email.

- Use a shared multifunction printer (MFP) or digital sender
- Uses Microsoft Office Optical Character Recognition (OCR) installed on Windows Server to create searchable documents
- Supports custom metadata capture and workflow
- Creates searchable pdf, mdi and tif formatted documents

Scanning Enabler 2007™ v2.x Routing Coversheet Service

Adds support for multifunction printers (MFPs) and Digital Senders. License for one server computer with Scanning Enabler 2007™ v2.x installed any edition. One maximum for each SharePoint Application. \$1,090.00
